

Looking Good

Qt Quick on the Raspberry Pi

Douglas Gore (@doug gore)

What we will cover

Background

Introduction to Qt5 and QtQuick

Simple game

Particle effect

Presentation system

Some cool demos

A tale of two processors

Pi Processors

CPU: ARM1176JZF-S 700Mhz

OS, general processing

GPU: Broadcom VideoCore IV 250Mhz

Video decoding, video encoding, audio decoding, 3D graphics, camera capture and processing

A blue Nintendo DS console is shown from a three-quarter perspective, open. The top screen is tilted back, and the bottom screen is visible. The console has a black directional pad on the left and several buttons on the right. The text "BETTER THAN THIS" is overlaid in large, bold, red capital letters across the center of the console.

BETTER
THAN
THIS

0.6 GFLOPS

BETTER
THAN
THIS

7.3 GFLOPS

6.2 GFLOPS

11 GFLOPS

4.8 GFLOPS

An iPad and an iPhone 2G are shown side-by-side. The iPad is on the left, and the iPhone is on the right. Both devices are black with silver borders. The text "BETTER THAN THIS" is overlaid in large, red, outlined letters across the center of the image.

BETTER
THAN
THIS

16 GFLOPS

24 GFLOPS

<http://www.raspberrypi.org/help/faqs/>

Why so slow?

Media processor

Just add CPU to get Pi

I want the power

Triangles and Shaders

Wireframe mesh of Linguini from Ratatouille

Wow that's a lot of triangles!

Hypertexture shader from Ratatouille

Hypertexture + some extras = baguette

Simple fragment shader

```
void main(void)
{
    gl_FragColor = vec4(0.0, 1.0, 0.0, 1.0);
}
```

GREEN

Vector

Looks complicated?

Don't worry

Introducing Qt 5

What is Qt5?

- A huge multi-platform system for software development
- Originally C++ and fairly low level but now offers Qt Quick (QML) and JavaScript
- Qt Quick 2 uses OpenGL (GPU) for sophisticated, fast graphics

How to install

Qt 4.8 is part of Raspbian Wheezy

Qt 5.2.1 will be in Raspbian Jessie

Compile from source

Twolife.be pre-built packages for Qt 5.2.0

Installing the twolife.be packages

Note: there could be some side effects or compatibility issues

```
sudo pico /etc/apt/sources.list
```

```
deb http://twolife.be/raspbian/ wheezy main backports
```

```
sudo apt-key adv --keyserver keyserver.ubuntu.com --recv-  
key 2578B775
```

Installing Qt5 continued...

```
sudo apt-get update
```

```
sudo apt-get install qt5-default libqt5qml-graphicaleffects  
libqt5quickparticles5 qtdeclarative5-qtquick2-plugin  
qtdeclarative5-window-plugin qtdeclarative5-particles-  
plugin qmlscene
```

Continued again...

```
sudo ln -fs /opt/vc/lib/libEGL.so /usr/lib/libEGL.so
sudo ln -fs /opt/vc/lib/libEGL.so /usr/lib/arm-linux-gnueabi/libEGL.so
sudo ln -fs /opt/vc/lib/libEGL.so /usr/lib/arm-linux-gnueabi/libEGL.so.1
sudo ln -fs /opt/vc/lib/libEGL_static.a /usr/lib/libEGL_static.a
sudo ln -fs /opt/vc/lib/libEGL_static.a /usr/lib/arm-linux-gnueabi/libEGL_static.a
sudo ln -fs /opt/vc/lib/libGLESv2.so /usr/lib/libGLESv2.so
sudo ln -fs /opt/vc/lib/libGLESv2.so /usr/lib/arm-linux-gnueabi/libGLESv2.so
sudo ln -fs /opt/vc/lib/libGLESv2.so /usr/lib/arm-linux-gnueabi/libGLESv2.so.2
sudo ln -fs /opt/vc/lib/libGLESv2_static.a /usr/lib/libGLESv2_static.a
sudo ln -fs /opt/vc/lib/libGLESv2_static.a /usr/lib/arm-linux-gnueabi/libGLESv2_static.a
sudo ln -fs /opt/vc/lib/libbcm_host.so /usr/lib/libbcm_host.so
sudo ln -fs /opt/vc/lib/libbcm_host.so /usr/lib/arm-linux-gnueabi/libbcm_host.so
sudo ln -fs /opt/vc/lib/libvchiq_arm.a /usr/lib/libvchiq_arm.a
sudo ln -fs /opt/vc/lib/libvchiq_arm.a /usr/lib/arm-linux-gnueabi/libvchiq_arm.a
sudo ln -fs /opt/vc/lib/libvchiq_arm.so /usr/lib/libvchiq_arm.so
sudo ln -fs /opt/vc/lib/libvchiq_arm.so /usr/lib/arm-linux-gnueabi/libvchiq_arm.so
sudo ln -fs /opt/vc/lib/libvcos.a /usr/lib/libvcos.a
sudo ln -fs /opt/vc/lib/libvcos.a /usr/lib/arm-linux-gnueabi/libvcos.a
sudo ln -fs /opt/vc/lib/libvcos.so /usr/lib/libvcos.so
sudo ln -fs /opt/vc/lib/libvcos.so /usr/lib/arm-linux-gnueabi/libvcos.so
```

...or use my script

Get the code from GitHub

```
git clone git://github.com/DougGore/cardiffjam.git
```

```
cd cardiffjam
```

```
chmod a+x install_qt5.sh
```

```
./install_qt5.sh
```

Wait a few minutes

Some QML

```
import QtQuick 2.0
```

Bring in the features you need

```
Rectangle
```

Object type

```
{
```

```
    width: 1280
```

Attributes

```
    height: 720
```

```
    Rectangle
```

```
    {
```

```
        anchors.centerIn: parent
```

```
        width: 256
```

```
        height: 256
```

```
        color: "blue"
```

```
    }
```

```
}
```
